# Simulating
your world

Optimize tools
Validate experiments
Assess *in vivo* imaging and therapeutic protocols

Discover MC simulations

BET Solutions provides simulation services for advanced experiments on multi-scale level for both diagnostic and therapeutic protocols.

By combining advanced Monte Carlo packages, detailed anthropomorphic phantoms and computational animal models, we carry out studies for:

- Geometry optimization of entire imaging systems or specific components
- Data generation for the evaluation of image processing algorithms
- Evaluation of alternative clinical and pre-clinical imaging protocols
- Dosimetry studies using computational models in Radiation Therapy and Radiology

Validate your results, using realistic data and easily explore the *in vivo* world!

For research use only. Not for use in diagnostic procedures.
